Cost Comparison Snapshot

About This Report

Capital Link prepared this Cost Comparison Snapshot to provide XYZ Health Center with a better understanding of its spending on patient medical care using our proprietary database of health center financial audits and Uniform Data System (UDS) information.

This snapshot includes multi-year trends on medical costs of care metrics and performance measures. It illustrates how your health center's specific metrics compare to peer groups, highlighting areas for further examination to support performance improvement.

Covering the three-year period of 2017 - 2019, the dashboards show:

- Overall Peer Costs Comparison
- Medical Costs per Patient
- Medical Costs per Visit

The metrics in this report are calculated using cost components as defined by standardized reporting requirements for the Uniform Data System, Table 8A: Financial Costs. The cost components are:

- Staff Costs: Includes salaries and benefits for medical providers and medical support personnel (hired and contracted), excluding lab staff.
- Lab and X-Ray Costs: Includes all medical lab and x-ray costs including supplies and lab staff.
- Overhead Costs: Includes facilities costs, allocated based on square footage, and non-clinical support services costs assigned to the particular service.
- Other Direct Costs: Includes dues, supplies, equipment depreciation, travel, CME, EHR system, and continuing medical education.

Methodology

The analysis and results contained in this report are based on two primary data sources covering the 2017 - 2019 period.

- Audited financial statements of health center corporations reported by fiscal year.
- Uniform Data System (UDS) information as self-reported by health centers each calendar year.

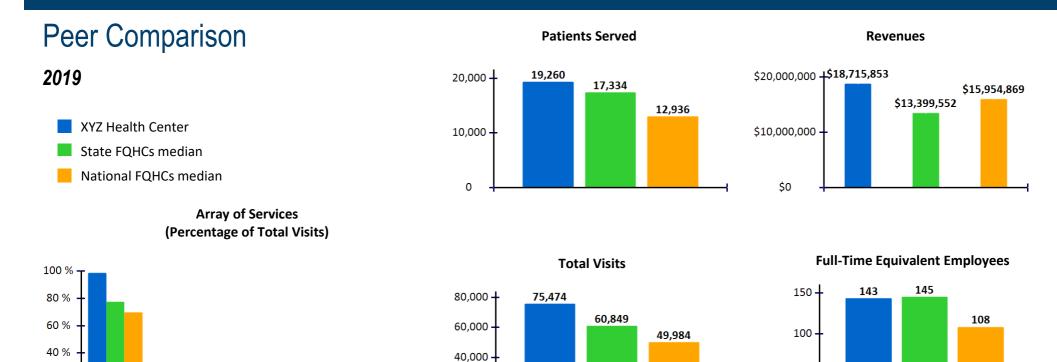

The comparative data sets include aggregated data from audited financial statements and UDS reports from Capital Link's proprietary financial and operational database. The specific number of health centers included in each comparative data set is listed below.

Data	State FQHCs 2019	National FQHCs 2019			
Financial Audits	10	974			
UDS Data	12	1,365			

Percentiles

Statistical measures used to describe the financial ratios and trends include the 50th percentile (median), 75th percentile, and 25th percentile. By definition, half the values in a set are greater than the median and half are less. Therefore, the median is not skewed by large or small values outside the typical range as can happen with average figures. The 75th percentile is a value that is equal to or greater than 75 percent of others in the data set. The 25th percentile is a value that is equal to or greater than 25 percent of others.
